# The Syndicate Secrets

The Sneaky Vampire Syndicate ("SVS") was formed by a group of developers, business leaders and friends who have a vision and shared passion for NFTs with a combined 20+ years of experience in the crypto space.

SVS partnered with **Mig** (a previous Bored Ape Yacht Club artist) to create 8,888 vampire NFTs.

SVS' main mission and focal point is its community: remaining transparent and seeking guidance from holders, while providing value and catering to their needs in providing unseen and unique utility.

# Antibot & Gas Wars

SVS' innovative mint was launched with an anti-bot system with all development completed by its in-house team of designers, UX leads and developers.

It was deemed by the industry as a widely successful measure in preventing gas wars as well as resulting in a dispersed and diversified ownership structure.

Many projects have since followed suit in copying this fair minting process.

Further details on the minting process can be found from SVS' Lead Developer in his [Medium](#) article.

## Metaverse

SVS is an official partner of The Sandbox and Wilder World, these partnerships are greatly valued as we believe in the future of the metaverse and the potential it has for creating and maintaining online connections in the digital world.

By working with a team of experienced metaverse builders, SVS is bringing the Syndicate's Lair to life! SVS' allocated 3x3 Land within The Sandbox will serve as a hub for all SVS related Metaverse aspects. Plans to vastly expand Metaverse integration with future partnerships and collaborations are also on the horizon (social meetups, events and concerts exclusive to SVS holders).

# Roadmap 1.0 Completion & Bat Companions

SVS successfully completed its first roadmap within 8 weeks of the initial mint, including the release of the first Vampire **Bat Companion NFTs**.

The bats are companions to the Vampires and were claimable for free by SVS Vampire holders. SVS also confirmed an allocation of land in the Sandbox metaverse and introduced the staking of **\$BLOOD** utility tokens to the project.

Special giveaway for all vampires within the first week.

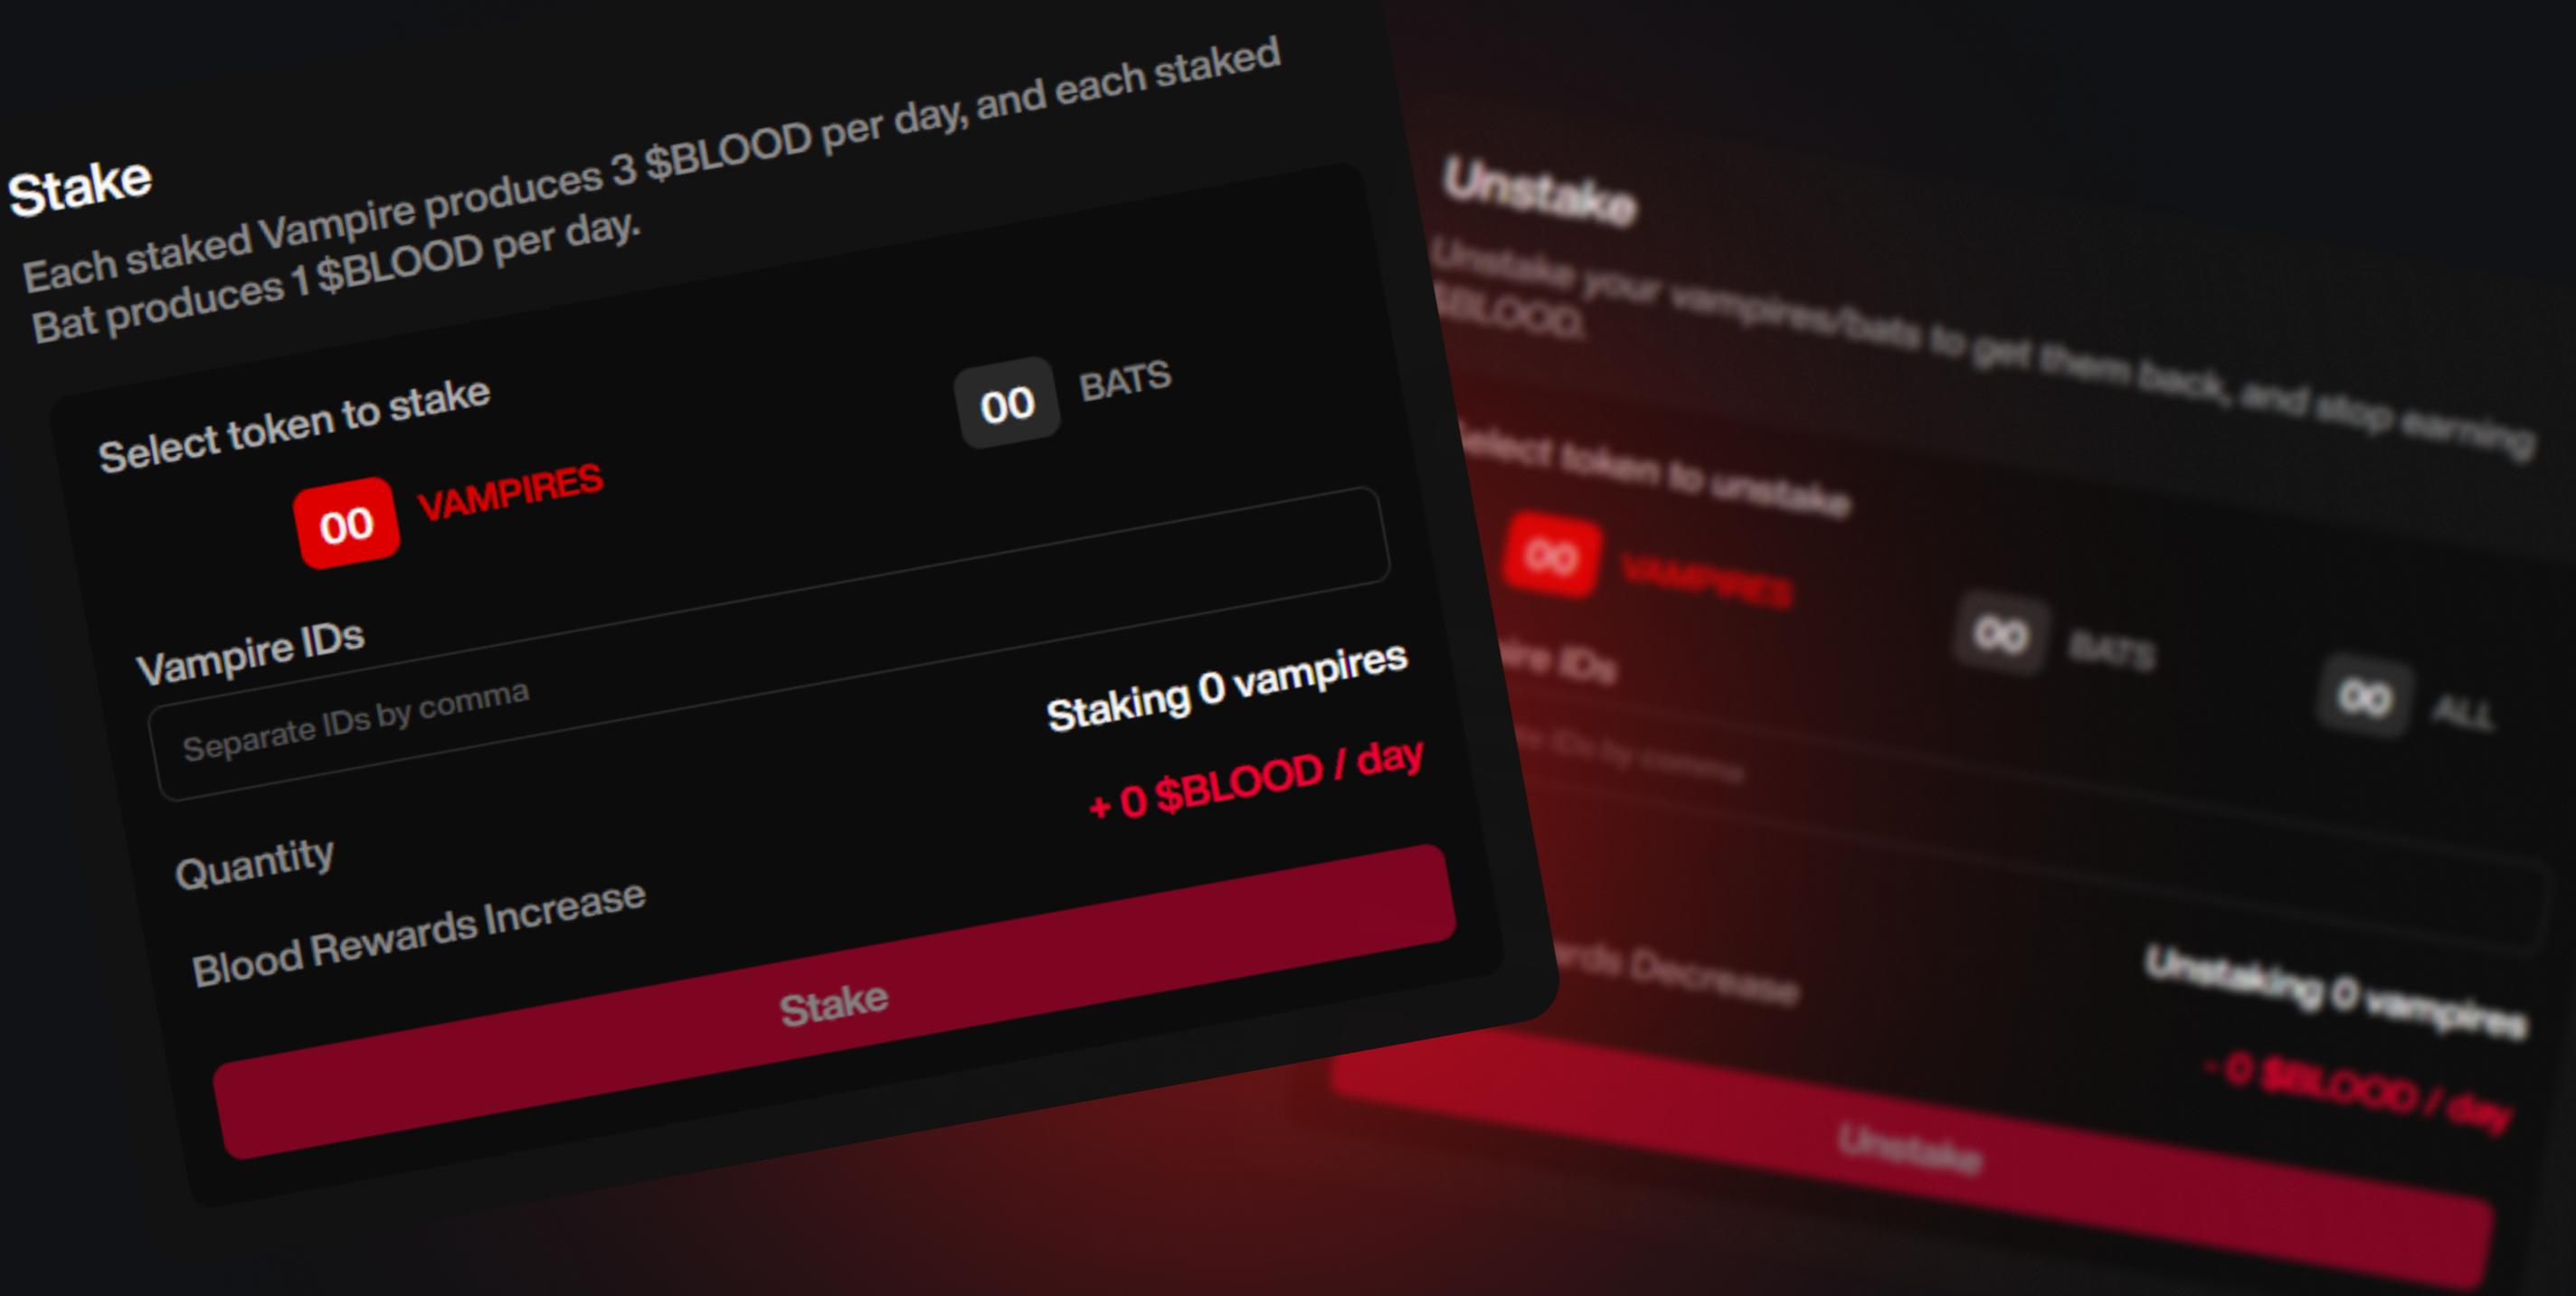

All vampires will get a special companion; The Syndicate releases the bats.

It gets cold without sunlight. Merch release.

Introduction of the Vampire Lair. Hang out and kick back with your fellow vampires in the Metaverse.

Generation 2 teaser.

# \$BLOOD Utility Token

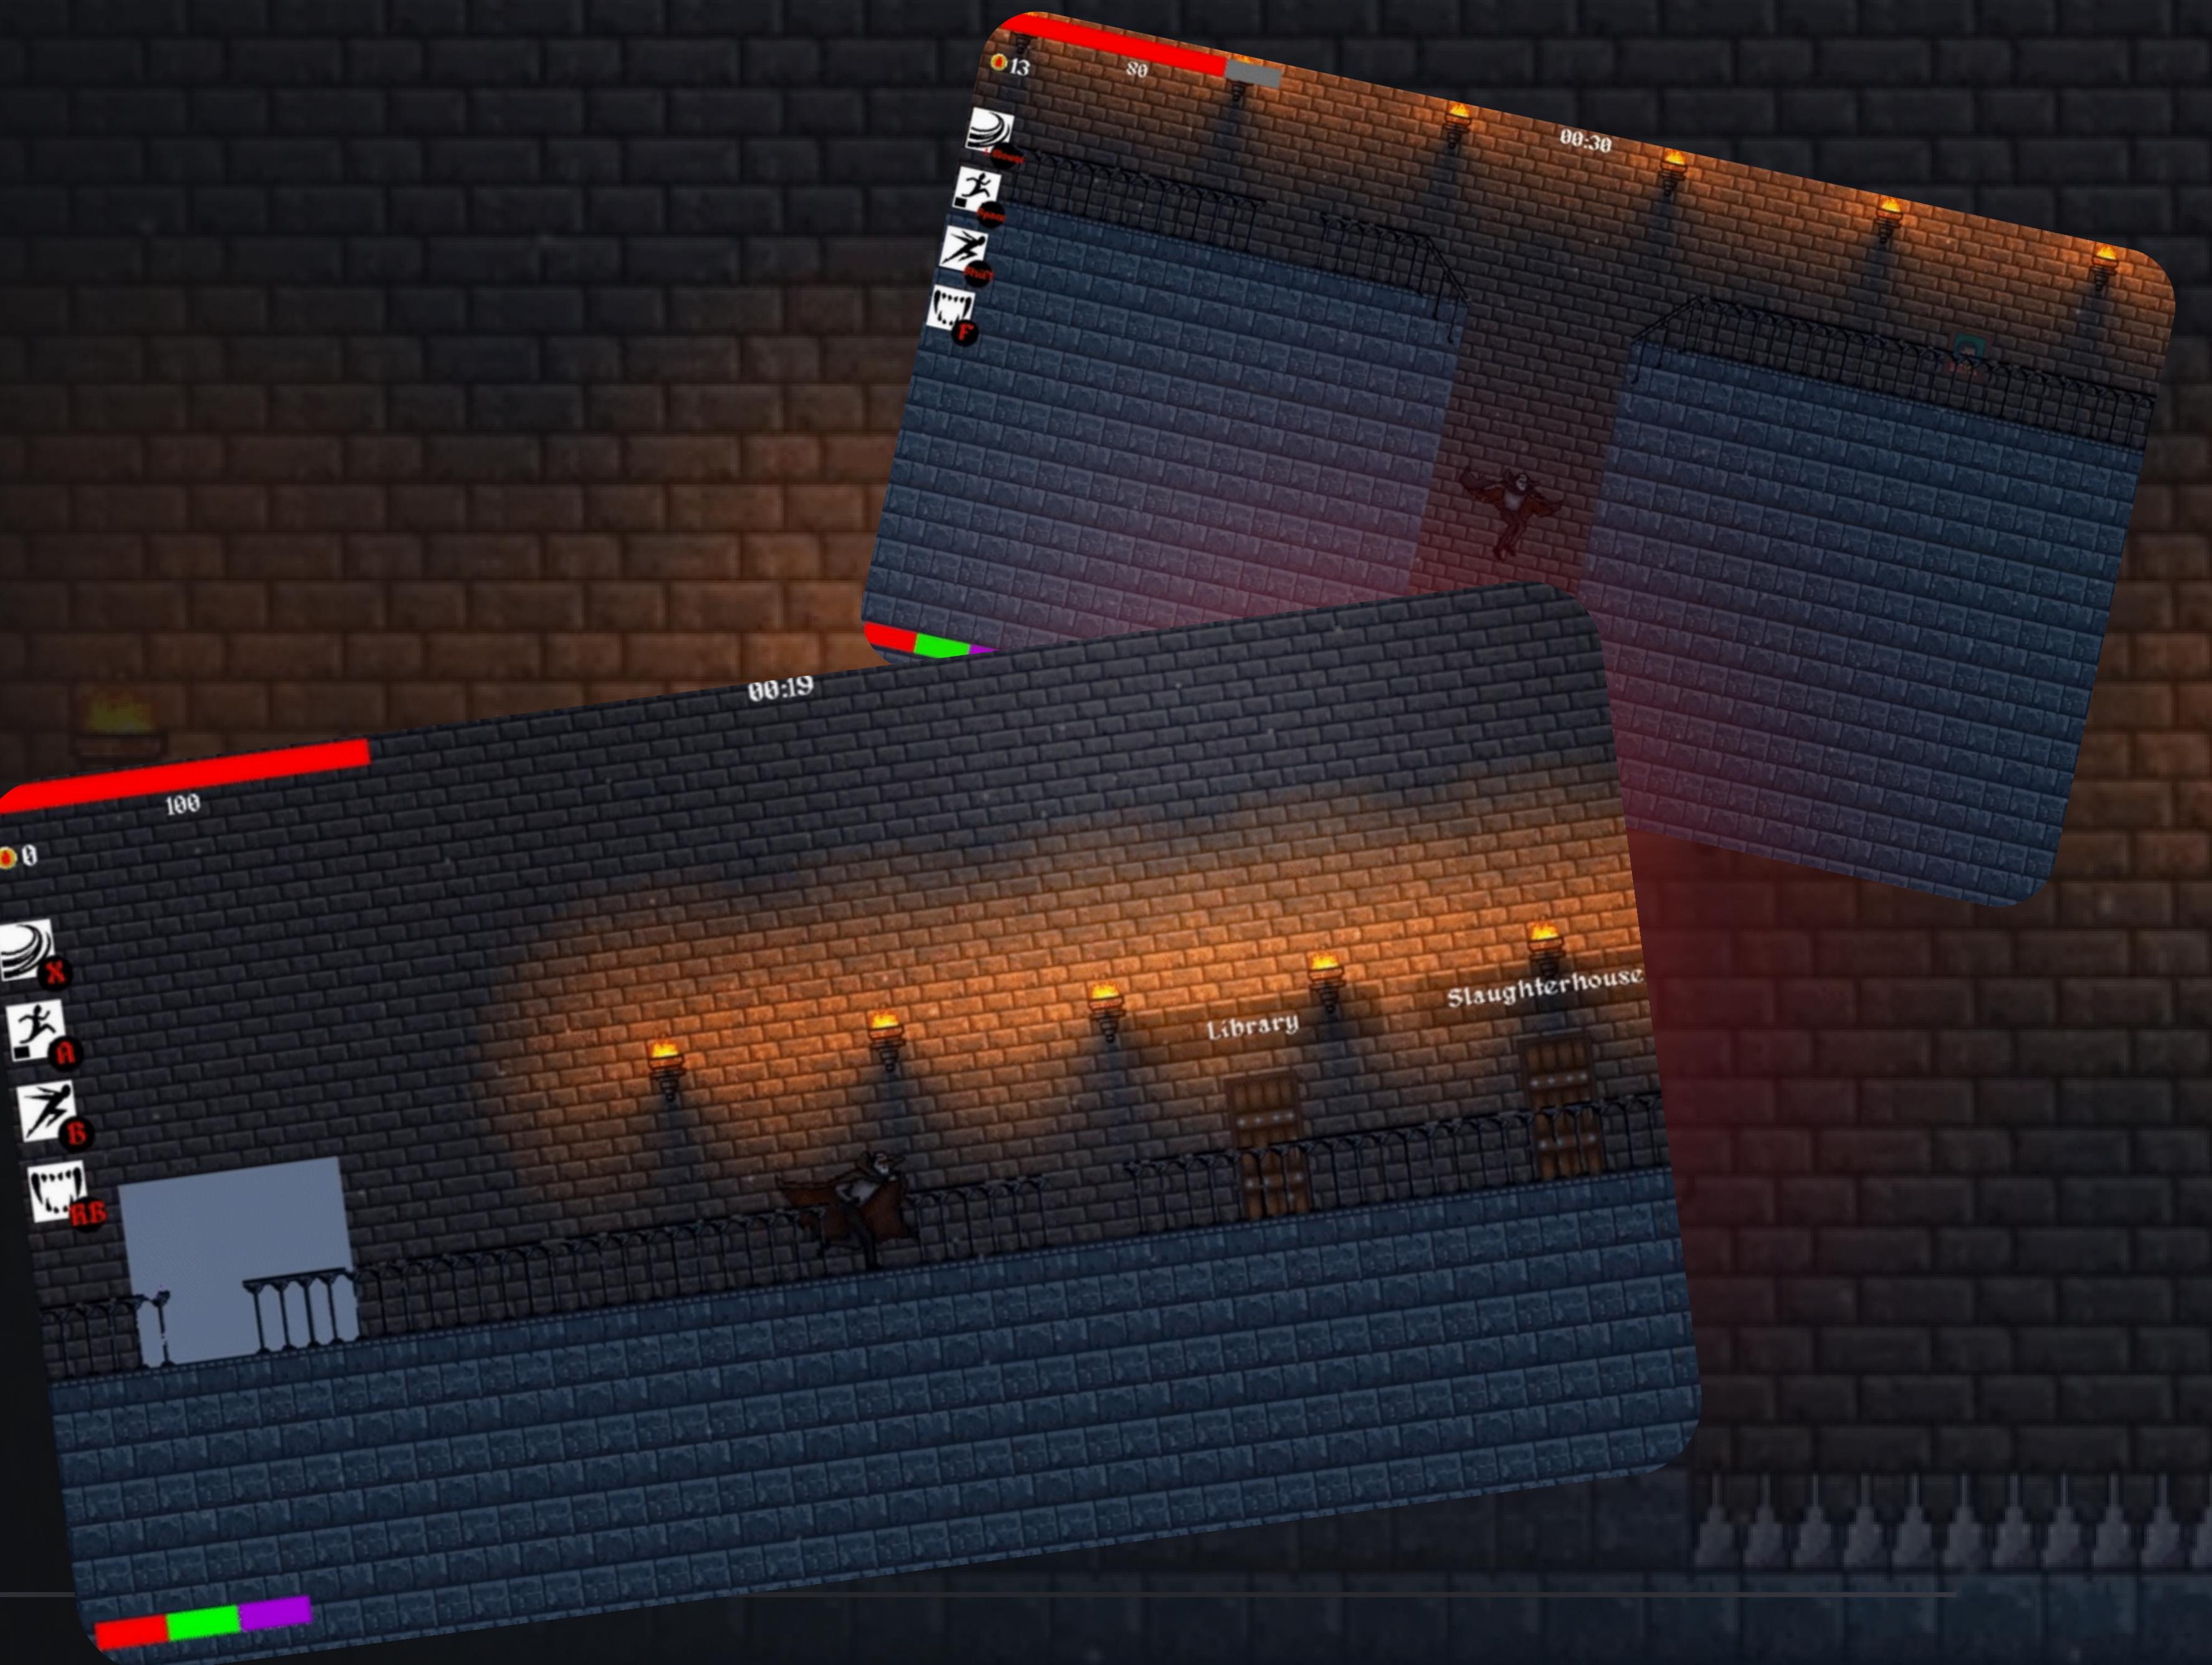

## HIGH-LEVEL DETAILS

- 滴 **\$BLOOD** can be produced by staking your Vampire or Bat through the SVS Dashboard.
- 滴 **\$BLOOD** remains purely a utility token and will be the focus of all aspects of SVS moving forward, with aims to continue to add functionality and benefits for holders.
- 滴 **\$BLOOD** will also be used for breeding Gen 2 Vampires (with the exact amount of **\$BLOOD** required TBD).
- 滴 **\$BLOOD** will also provide access to purchase an exclusive registered & private label SVS champagne created with master champagne connoisseur Shammi Shinh (2022 release).
- 滴 Future **\$BLOOD** utility also includes exclusive SVS items/perks within the metaverse and access to future real-world events and product releases.

# SVS Game

After SVS delivered on its initial roadmap, SVS wanted to provide something "extra" to its community with the development of its very own SVS game by Krassenstein from [StaticCityGames](#) and streamed live on Twitch.

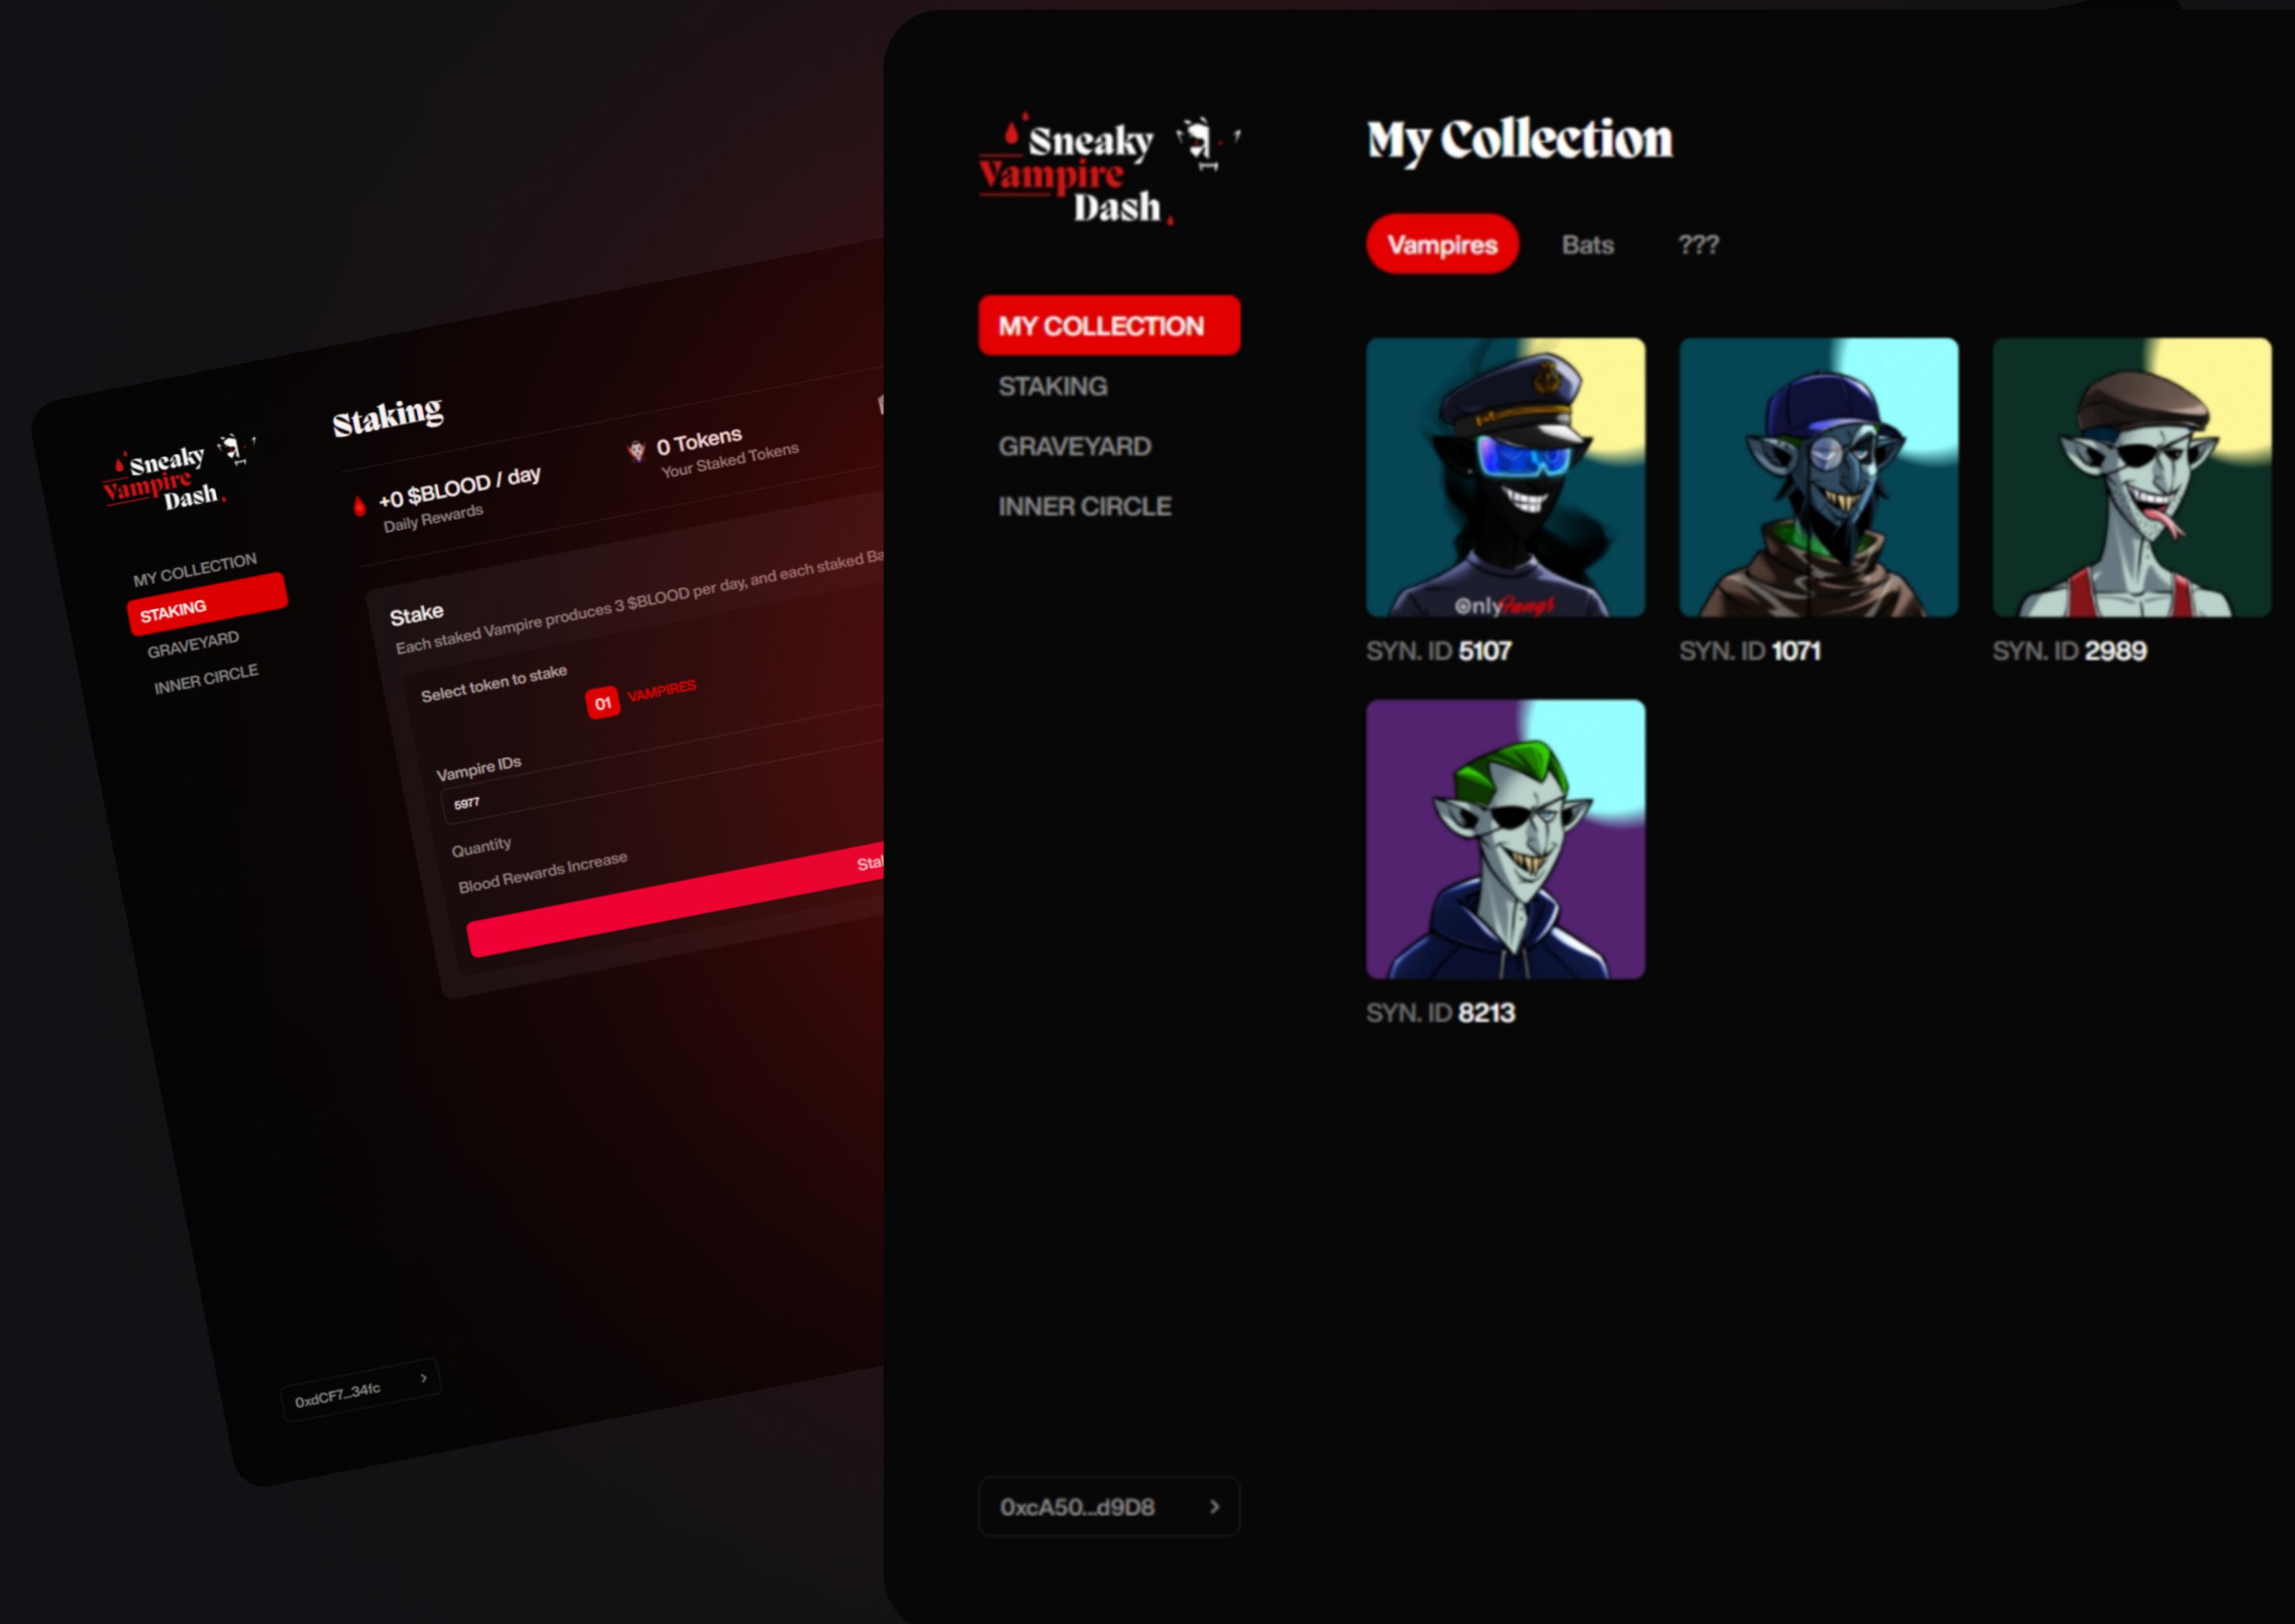

## COMMUNITY

The game will be exclusively available to play for all SVS Vampire NFT holders. SVS takes great pride in having a strong community, with their input being implemented into the game's development and upcoming features wherever possible.

# The SVS Hub

In order to provide the most seamless user experience, the SVS dashboard was created to function as a central hub for the community to interact with the SVS ecosystem.

If they have staked their NFTs, it is also possible to view your SVS tokens through the dashboard as they are no longer available in your wallet. This way, a user can still view their NFTs even though they are locked up being staked.

## Roadmap 2.0 & Generation 2

Having completed the initial Roadmap within 8 weeks, SVS swiftly released Roadmap 2.0. This includes the Generation 2 release, followed by breeding between generations.

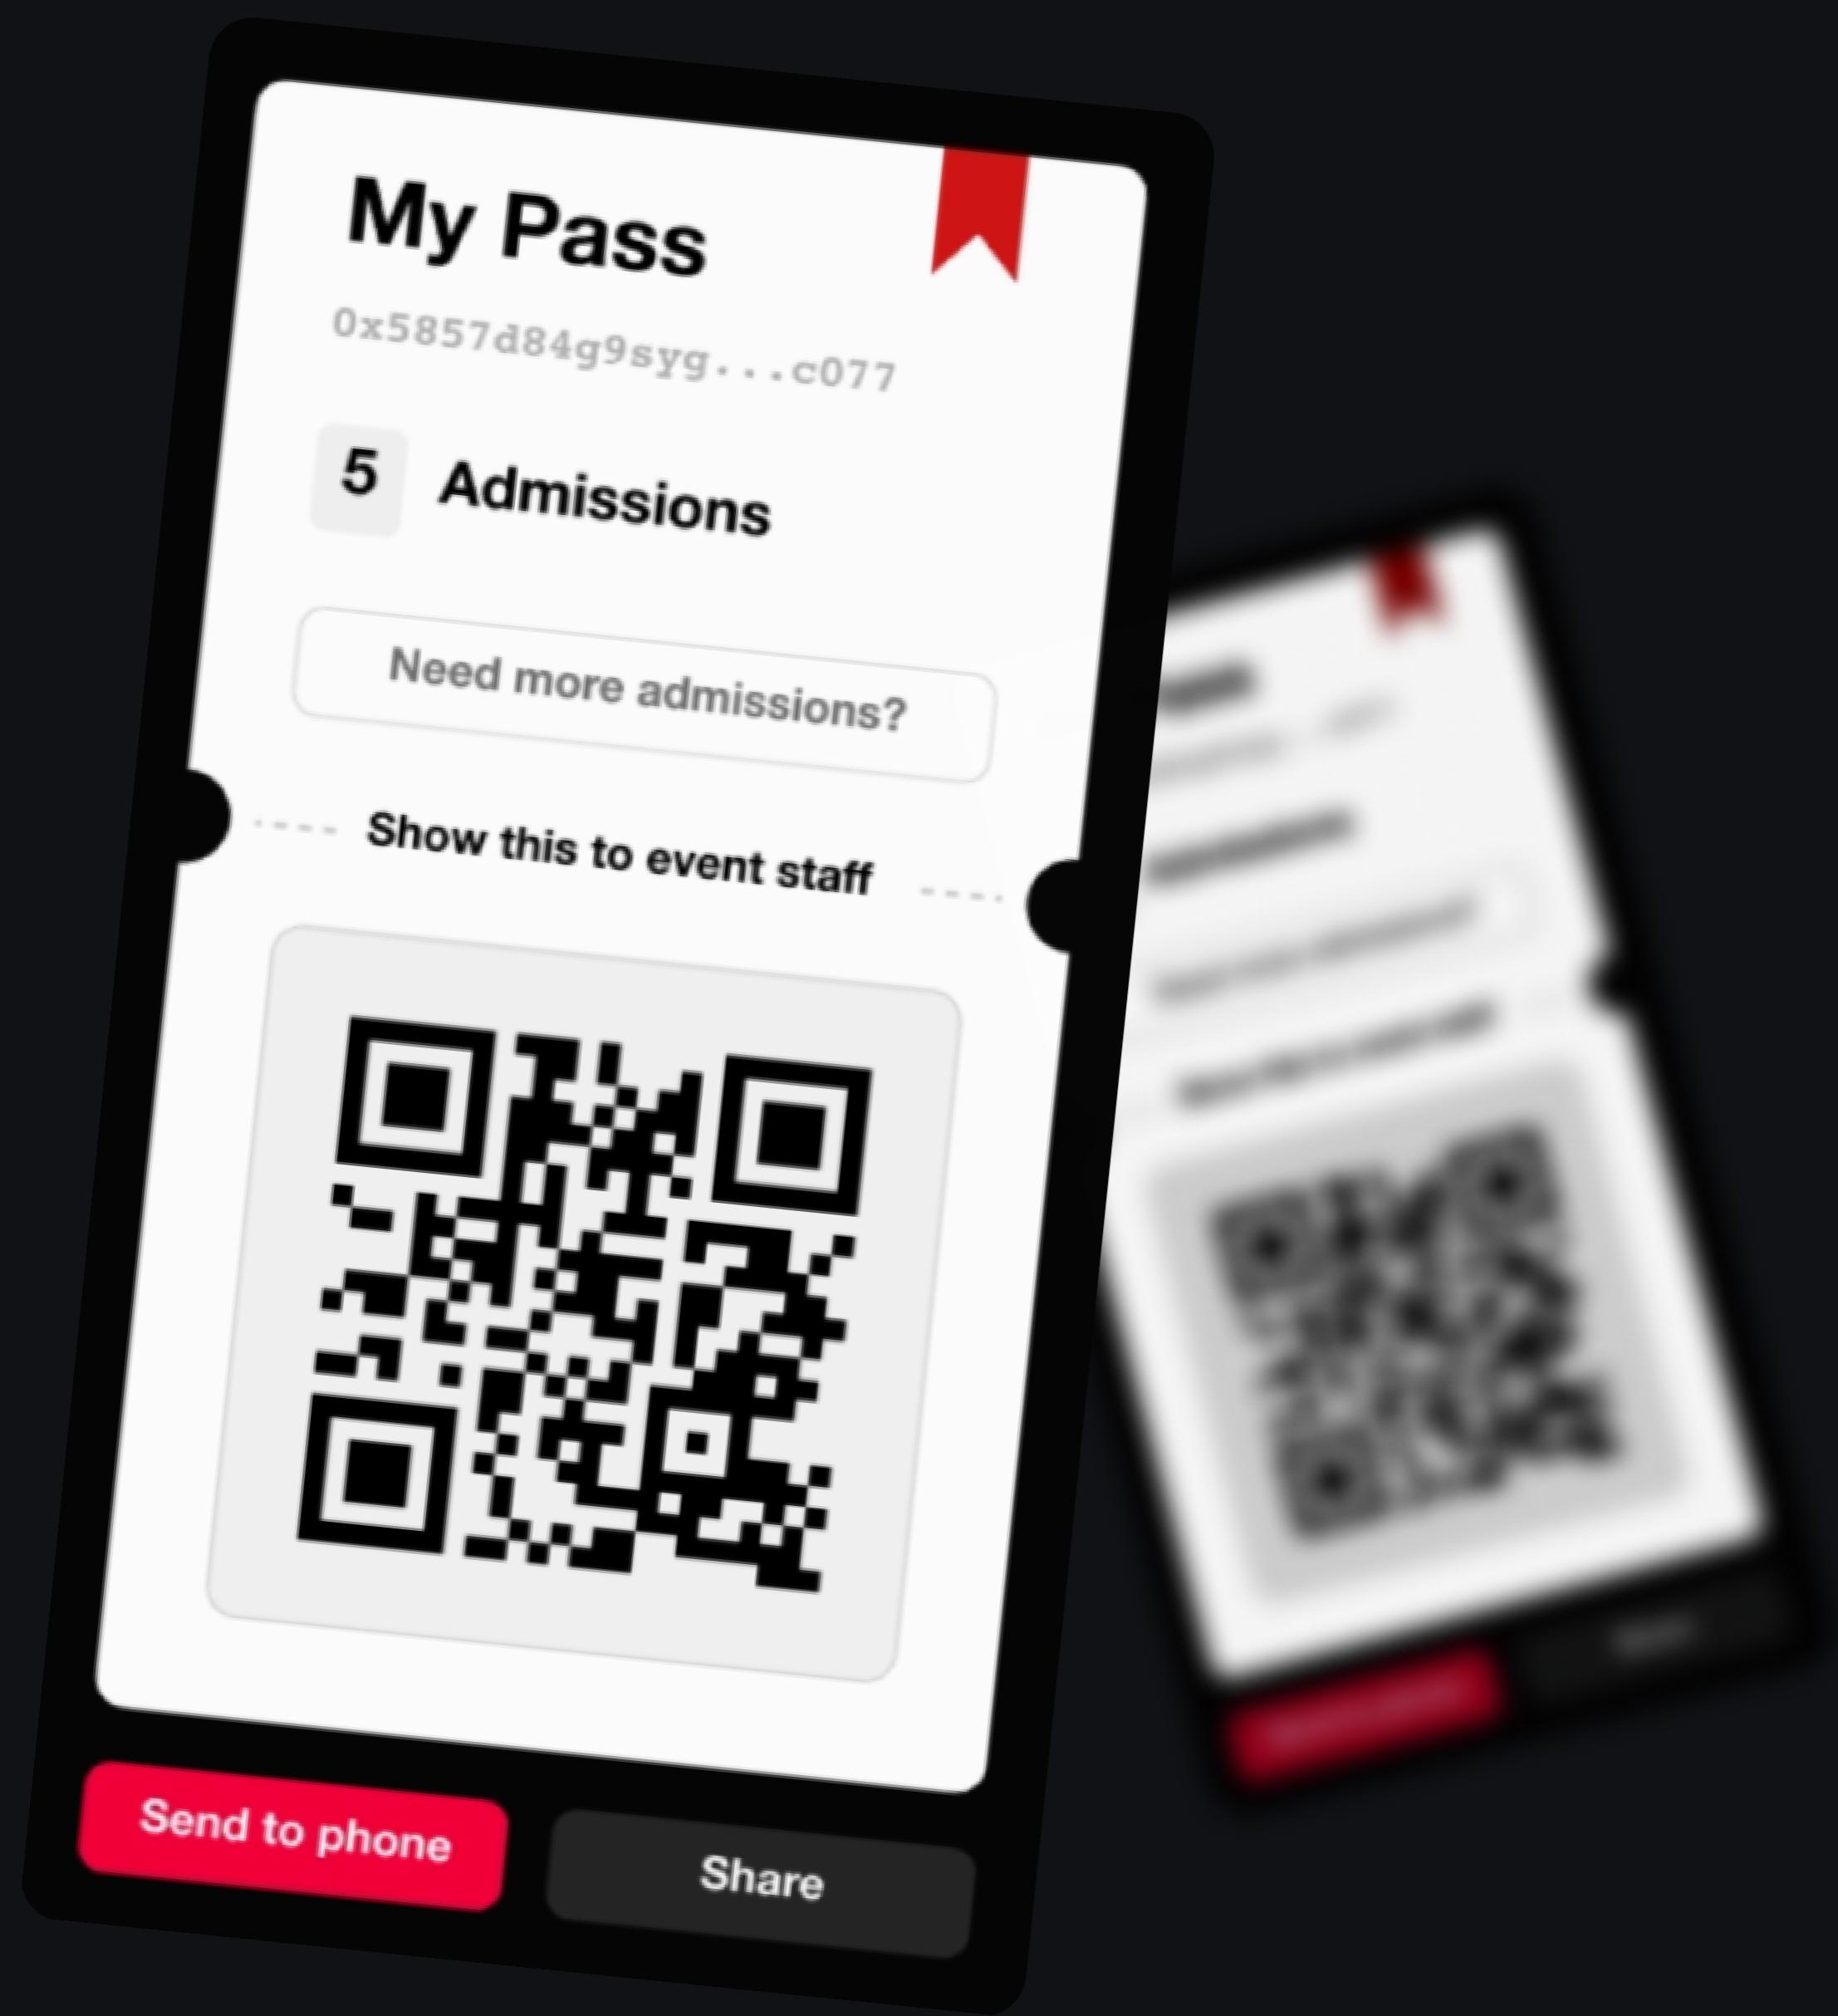

Roadmap 2.0 is only the beginning of SVS' future plans. SVS has already announced and introduced several partnerships and exclusive content planned in the coming months and throughout 2022.

The full SVS Roadmap is still in very early stages and there is a great deal of utility and upcoming features for Vampire Holders and Investors.

## Future Events Capacity & Ability

SVS' main objectives from the beginning was to provide utility outside of just online, NFT and crypto based means. We have already leveraged several partnerships with renowned brands, established connections, and currently have planned and in preparation:

- ❖ Fashion Collaborations & Exclusive Merch
- ❖ Access to Events & Concerts for SVS Holders
- ❖ Access to Exclusive Bars & Venues
- ❖ Discounts with Retail & Travel Partners
- ❖ Building 3D Models for the Metaverse

## QR Code System & Functionality

In preparation for future planned events and collaborations, SVS has developed a QR Code system for access to these events.

The proof of ownership QR Code functionality has unlimited real-world applications. SVS' collaborations will be at the forefront of innovation using this to ensure only holders have access to events, whilst remaining 100% unexploitable.

This system also allows for complete customizability dependent on the event. For example, there is also raffle ability for more limited access events, in which demand outweighs capacity. This QR Code system allows for infinite scalability, and SVS is currently the only NFT Collection with this type of system.
